Professional Summary

Backend Developer with 2+ years of experience specializing in designing and developing scalable microservices using Spring Boot and Java. Proficient in building RESTful APIs, TMF-compliant telecom services, and integrating databases like MySQL and MongoDB. Experienced in Microservices Architecture, Distributed Systems, Event-Driven Architecture, Kafka, RabbitMQ, API Gateway Integration, and asynchronous processing. Skilled in backend performance optimization, CDR processing, BSS integration, API validation, CI/CD, and implementing secure, high-performance enterprise applications using modern Java frameworks.

Professional Experience

Aryagami Cloud Services, Hyderabad | Dec 2025 – Present

- Designed and developed microservices-based backend systems using Spring Boot and REST APIs.
- Integrated MySQL and MongoDB databases for efficient data storage and retrieval.
- Implemented authentication, authorization, and exception handling for secure and robust APIs.
- Optimized service performance through caching, asynchronous processing, and query tuning.
- Collaborated with frontend and DevOps teams to ensure smooth CI/CD deployments.

Full Stack Developer | Feb 2024 – Dec 2025
CVCORP Pvt Limited

- Developed and maintained full-stack applications using Java, Spring Boot, Angular, and REST APIs.
- Designed backend modules and integrated SQL Server databases for efficient data management.
- Built responsive frontend components using Angular, HTML, CSS, and JavaScript.
- Collaborated with teams on debugging, deployment, and feature enhancement activities.
- Led the project development from initial planning to final deployment, coordinating with team members and ensuring successful end-to-end delivery.

Software Engineer Intern | Aug 2022 – Jan 2023
Miracle Software Systems

- Contributed to the development and support of a live healthcare application using Java and Spring Boot.
- Assisted in developing REST APIs and backend modules for healthcare workflows and patient management.
- Collaborated with the development team in debugging, testing, and production support activities.
- Participated in end-to-end feature development and front-end-backend integration tasks.

Technical Skills

Languages: Java, SQL, JavaScript, TypeScript
Backend & Frameworks: Spring Boot, Spring MVC, Microservices, REST APIs, Spring Security, Spring Cloud
Messaging & Event Streaming: Kafka, RabbitMQ
Frontend: Angular, React, HTML, CSS, Bootstrap
Databases: MySQL, PostgreSQL, MongoDB, SQL Server, Duck DB
Cloud & Tools: AWS, Git, Maven, Docker, Postman, JIRA, Linux
Concepts: Microservices Architecture, API Integration, Authentication & Authorization, Exception Handling, CI/CD, Distributed Systems, Backend Development, Performance Optimization, Production Support, TMF APIs.

Projects

TMF Standards Transformation Platform

Technologies: Java, Spring Boot, Kafka, TMF APIs, REST APIs, Microservices, PostgreSQL

- Migrated legacy telecom applications into TMF-compliant architecture following telecom industry standards.
- Transformed and enhanced 23+ telecom service modules to align with TMF Open API standards.
- Developed standardized Product, Service, and Resource Inventory APIs for interoperability across telecom systems.
- Integrated Kafka-based asynchronous communication for efficient event-driven data processing between services.
- Participated in CTK validation, API restructuring, schema corrections, and compliance testing activities.

Telecom Gateway Integration & BSS Management System

Technologies: Java, Spring Boot, RabbitMQ, Microservices, REST APIs, MySQL, MongoDB, Docker, Linux

- Developed and maintained telecom backend services for SIM-based product and service management.
- Implemented end-to-end gateway integrations between telecom platforms and BSS systems for seamless data exchange.
- Developed microservice-to-microservice event handling and asynchronous communication using RabbitMQ.
- Worked on provisioning flows, usage processing, recharge validations, and customer service operations.
- Improved API reliability and system performance by implementing retry mechanisms, validations, and monitoring processes.

Telecom CDR Processing & Usage Validation System

Technologies: Java, Spring Boot, Angular, Duck DB, SQL, Microservices, Linux, JSON

- Developed high-performance CDR processing and customer usage validation systems for telecom operations.
- Used Duck DB for fast and efficient processing of large-scale customer usage and billing records.
- Implemented automated validation logic for voice, SMS, and data usage processing workflows.
- Worked on CDR regeneration, error handling, reconciliation, and report generation functionalities.
- Optimized processing performance for large datasets through query tuning and batch processing techniques.
- Developed Angular-based frontend modules for monitoring, validation, and reporting of telecom customer usage data.

Secure Student Management & Examination System

Technologies: Java, Spring Boot, Angular, MySQL, REST APIs, Spring Security

- Developed a secure student management system for handling large-scale academic and examination data.
- Implemented automated exam processing, validation, and result management functionalities.
- Designed role-based authentication and authorization mechanisms for secure access control.
- Built responsive frontend modules for student registration, attendance, examinations, and reporting.
- Improved system reliability and data integrity through validation mechanisms and optimized database operations.

Certifications

TM Forum Open API Certification – TMF Standards & Telecom API Implementation
CVCORP Professional Training Certification – Full Stack Development
Miracle Software Systems Internship Certification – Java, Spring Boot, SQL, Linux & Google Cloud Fundamentals

Education

B. Tech – Computer Science and Engineering Miracle Education Society Group of Institutions **CGPA: 7.17**
